

Слайд	Голосовое сопровождение	Time code
Начало	<i>The Central Design Valve Bureau was founded in 1945.</i>	00:08
Слайд со списком направлений деятельности	Today CKBA is the biggest Russian engineering company efficiently engaged in: - valve manufacture and complete shipments - valve design - R & D - standardization and expertise	00:14
Производство и комплектные поставки	Availability of well-developed co-operation, production facilities, including the own test benches allow to supply the wide range of pipeline valves and provide complete shipments	00:26
Отработка конструкции на специальных стендах	Up-to-date valve designs are permanently optimized passing all needed tests including special ones to verify hydraulic characteristics, seismic resistance, vibration strength, acoustic characteristics and so on.	00:38
Проектные и конструкторские работы	All designs are carried out using modern best practice and software providing putting into production as soon as possible high-tech valves on customer's request and meeting the specific requirements	00:52
Научно-исследовательские работы	With the view to the further valve industry development CKBA carries out works on realization of advanced materials and coatings. Technical serviceability and integrity of valve parts' test systems are studied and adopted.	1:11
Стандартизация	Company is a developer of over 60 interstate and national standards. More than 200 industrial and company's standards which are applied by 300 different Russian and CIS companies were developed and issued.	1:30
Экспертиза	The Company has Rostekhnadzor license for the right to perform technical expertise and safety assessment of pipeline valves being mounted on hazardous industrial facilities.	1:47
Содействие и издание технической литературы	Company's key staff members are always published their proceedings and articles in scientific and technical or special industry trade magazines, deliver their reports on scientific and technical conferences, and are the authors of different books and monographs as well as training and reference literature on valves.	2:01
Выпускаемая арматура	The Company manufactures as follows:	2:21
Запорная арматура	Stop valves – to shut-off operating fluid flow	2:24
Пред. и рег. арматура	Safety and control valves – for automatic equipment protection against the inadmissible pressure exceeding and for control parameters of fluid	2:30
Обратная арматура	Check valves – to prevent a reverse flow of operating fluid in line	2:41
